USACE Public Notice application can be tracked at

In administration of the laws enacted by Congress for
the protection and preservation of the navigable waters of
the United States, the Detroit District, under the authority
of the Rivers and Harbors Act of 1899, currently exercises
jurisdiction over the waterways listed below. Where
applicable, we have listed the known or approximate upstream
extent of our jurisdiction under the Rivers and Harbors Act.

With respect to an upper limit to navigability, a river
will, at some point along its length, change from navigable
to non-navigable. Very often that point will be at a major
fall or rapids, or other place where there is a marked
decrease in the navigable capacity of the river. The upper
limit is therefore often the same point traditionally
recognized as the head of navigation. Navigable waters of
the United States that are lakes typically do not possess a
head of navigation and are usually considered to be
“navigable throughout.” Examples of such “navigable
throughout” waters in the Detroit District include the Great
Lakes and their connecting channels.

On navigable waters of the United States that are non-
tidal lakes and rivers, Federal regulatory jurisdiction
extends laterally to the entire water surface and bed of a
waterbody, which includes all the land and waters below or
waterward of the ordinary high water mark (OHWM).
Jurisdiction extends to the edge of all such waterbodies,
even though portions of the waterbody may be extremely
shallow, or obstructed by shoals, vegetation or other
barriers. Marshlands and similar areas are thus considered
navigable in law, but only so far as the area is subject to
inundation by the ordinary high waters. In tributaries
entering navigable lakes or the navigable reaches of rivers,
the Corps of Engineers’ jurisdiction extends into these
tributaries to a point where such inundation by the ordinary
high waters does or could otherwise occur. These tributary
reaches are readily susceptible to improvements to enable
navigation on the waterbody.

This list represents our effort to provide the public
with a complete list of waterbodies for which we have made
navigability determinations (shown in bold type) as well as
sections of tributaries we have encountered that are
waterward of the OHWM of a navigable water of the United
States. The absence of a waterbody from this list should
not be taken as an indication that a particular waterbody is
not navigable or in Corps' jurisdiction (e.g., most canals open to navigable waters in the Detroit District are considered to be to be navigable waters but are not specifically noted in this list). For tributaries to navigable waters, even though this listing may use a recognizable landmark as a limit (e.g., road, RR bridge), jurisdiction extends to the OHWM of the listed navigable waterbody, and we must conduct an on-site verification to make a definitive determination of the extent of our jurisdiction. We revise this document as new information warrants.

Michigan waters precede Indiana waters in this listing. Michigan waters are arranged in the following order: (1) Lake Michigan and tributaries; (2) Lake Superior and tributaries; (3) St. Marys River and tributaries; (4) Lake Huron and tributaries (with the Inland Route as a subsection); (5) St. Clair River and tributaries; (6) Lake St. Clair and tributaries; (7) Detroit River and tributaries; (8) Lake Erie and tributaries. The listing of Michigan waters starts in southwest Michigan with the Galien River, runs up Lake Michigan, and proceeds around the state in a clockwise manner.
